

# FLAP DISCS

## 40/60/80 GRIT

- ✓ Premium Zirconia Alumina abrasive material
- ✓ Variable pressure allows for a coarse or smooth finish without changing discs
- ✓ Cooler operations than other types of grinding disc
- ✓ Simultaneously grinds and finishes

### WHY FLAP DISCS?

Flap discs are a more versatile option than many other types of grinding abrasives. These discs allow variable pressure to provide a coarse or smooth finish without having to change discs mid-process. Discs can also perform on uneven surfaces because of their flaps and flexibility. Discs contain a grinding aid for cooler, faster grinding on hard or gummy materials. Constructed with cloth backing these discs excel when durability is needed. Reliable for a wide range of applications including grinding, blending, and deburring. Available in Type 27 and 29 with a 40, 60, or 80 grit.
